

# SEEDS

MILESTONE ACHIEVED: THE SEEDS PROJECT HAS COMPLETED ITS EDUCATIONAL PROGRAMME, EQUIPPING TEACHERS WITH CREATIVE TOOLS TO BRING ECO-ART AND ENVIRONMENTAL AWARENESS INTO THE CLASSROOM.

## THE PROJECT

The SEEDS project has successfully completed its educational programme, marking a major milestone in its mission to empower teachers through Eco-Art. The programme provides innovative tools and resources that help educators integrate creativity, well-being, and environmental awareness into everyday classroom activities. Moreover, last July, teachers participated in hands-on training in Spain, gaining practical experience with the SEEDS methodologies and resources.

## TEACHERS TRAINING IN SPAIN

Last July, the SEEDS project organized a hands-on teachers' training in Spain, bringing together five teachers from Cyprus and five from Spain. During the training, participants were introduced to the project and guided through a variety of activities from the SEEDS educational programme, including painting tote bags with natural pigments, engaging in interactive group exercises, and creating ephemeral art. The session provided teachers with practical experience and foundational knowledge, enabling them to confidently apply the project's methodologies in their classrooms.

# PROFESSIONAL DEVELOPMENT MEETS CULTURAL EXCHANGE

In addition to the training sessions, participants had the opportunity to explore some of Spain's beautiful locations, including Pego, Gandia, and Valencia, combining professional development with cultural exchange. The training fostered collaboration and knowledge sharing among teachers from different countries, strengthening the European network of educators committed to creativity, well-being, and environmental awareness through Eco-Art.

## LOOKING AHEAD: BRINGING SEEDS TO SCHOOLS ACROSS EUROPE

Looking ahead, the SEEDS project will enter its next exciting phase: implementing the educational programme in schools across Spain and Cyprus, allowing teachers and students to experience Eco-Art activities firsthand. In the coming months, all educational materials developed by the project will be made freely available online, giving schools everywhere the opportunity to integrate creativity, well-being, and environmental awareness into their classrooms. SEEDS warmly invites any interested school to join this growing European network of educators committed to inspiring the next generation to connect with and care for the environment.
